# What needs your attention

The following things need your attention to continue the installation and keep your Windows settings, personal files, and apps.

[Change what to keep](#)

Windows Server upgrades are not recommended, for best results please clean install Windows Server 2016. If you must upgrade, before continuing make sure your app vendors support their applications on Windows Server 2016. Follow their specific recommendations before and after upgrade. For more information, go to <http://go.microsoft.com/fwlink/?LinkId=243105>. Important: If the software isn't compatible with Windows Server 2016 or if the app vendor doesn't support the app, uninstall it before you install Windows. If you don't uninstall the applications, your system won't be supported, the app might not work, and settings or other information might be lost.

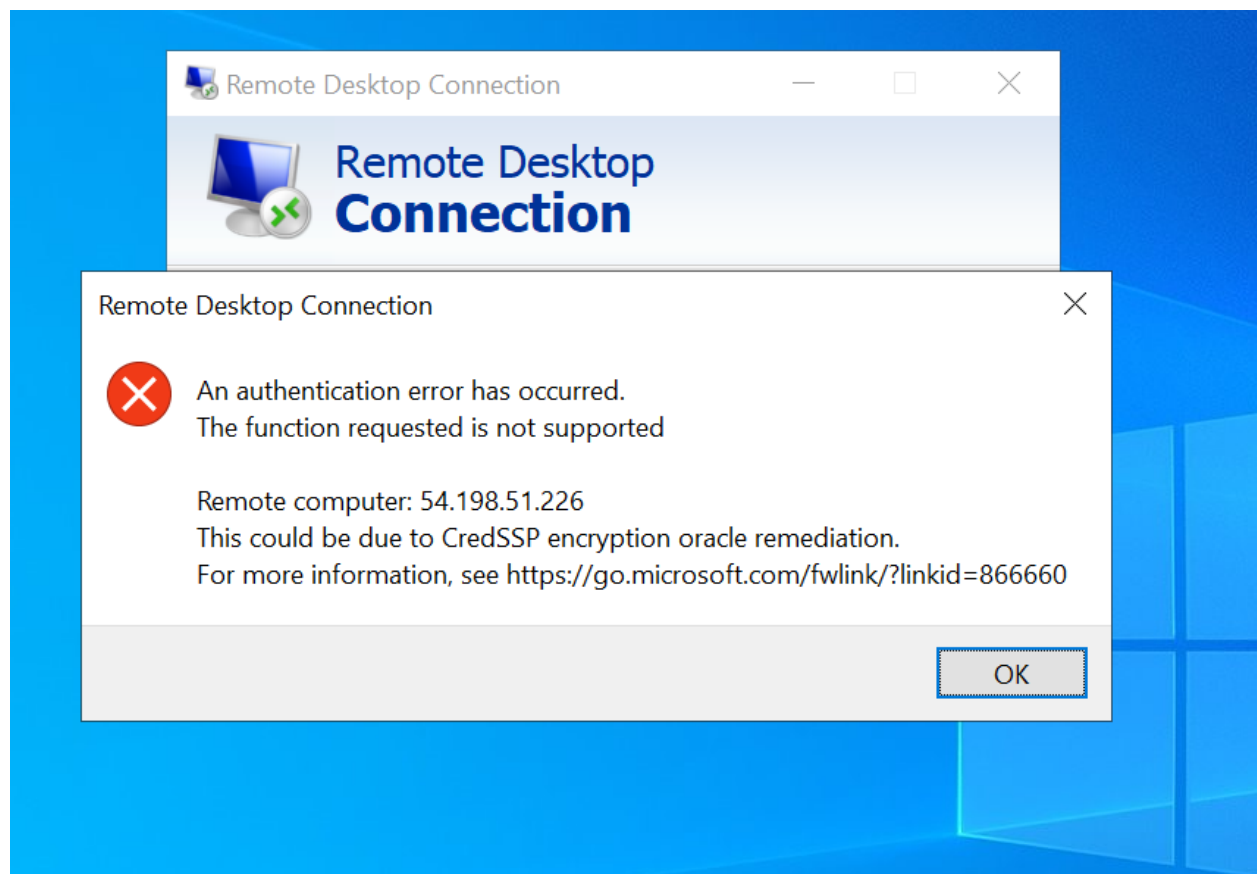

Confirm

Back

Refresh

Windows Server Setup copies and processes files. After several minutes, your Remote Desktop session closes. The time it takes to upgrade depends on the number of applications and server roles running on your Windows Server instance. The upgrade process could take as little as 40 minutes or several hours. The instance fails status check 1 of 2 during the upgrade process. When the upgrade completes, both status checks pass.

We have to wait until the system status check passes, otherwise we will get the below authentication error.

After the health checks pass , we need to check whether the upgrade is successful or not by logging into the server. If it fails it shows on the screen unable to upgrade. Otherwise it is upgraded.

# Patch instances now [Info](#)

## Basic configuration

Scan for missing patches or install patches, with or without rebooting. For more patching options, use the [Configure patching](#) page.

### Patching operation

- ☐ Scan
- ☒ Scan and install

### Reboot option

Specify whether Patch Manager should reboot your instances, or reboot on a schedule

- ☒ Reboot if needed
- ☐ Do not reboot my instances
- ☐ Schedule a reboot time New

### Instances to patch

Choose whether to patch all instances or only the instances you specify

- ☐ Patch all instances
- ☒ Patch only the target instances I specify

### Target selection

Choose a method for selecting targets

### Target selection

Choose a method for selecting targets.

- ☐ Specify instance tags  
Specify one or more tag key-value pairs to select instances that share those tags.

- ☒ Choose instances manually  
Manually select the instances you want to register as targets.

- ☐ Choose a resource group  
Choose a resource group that includes the resources you want to target.
